Allowable Subject Matter

1. Claims 1-4 are allowed.
2. The following is a statement of reasons for the indication of allowable subject matter:

The present invention relates to apparatus for processing signal in synchronization with a clock signal employing a buffer. In prior art of record, data is written into and read from the buffer using either different read and write clock signals (as in Nguyen – US 5,905,766), or the using one of the clock for modifying the other (as in Taniguchi et al. – US 5,996,052) in a manner directly from the buffer. Prior art of record, taken individually or collectively, fails to fairly teach such apparatus, as claimed, as a whole, including “an input flip flop for taking input data in synchronization with a clock signal; and output flip flop for outputting data in synchronization with the clock signal; a first data path for giving the input data taken in the input flip flop to the storage part; a second data path for giving data read out of the storage part to the output flip flop”, in independent claim 4, and similarly in independent claim 1 (claims 2-3 depend therefrom). Thus, claims 1-4 are found to be novel and unobvious over prior art of record.

Conclusion

3. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.

Nguyen (US 5,905,766) discloses Synchronizer, Method And System For Transferring Data.

Taniguchi et al. (US 5,996,052) discloses Method And Circuit For Enabling A Clock – Synchronized Read-Modifying-Write Operation On A Memory Array.

Ogawa (US 5,272,728) discloses Preamble Length Adjustment Method In Communication Network And Independent Synchronization Type Serial Data Communication Device.

Wolf (US 4,525,849) discloses Data Transmission Facility Between Two Asynchronously Controlled Data Processing Systems With A Buffer Memory.
